VersaReports Releases ReportServer Version 2.5
Innovative Low-Cost Reporting Server Improves Report Distribution Features

ATLANTA, January 19, 2016 /PRNewswire/ -- VersaReports, a developer of enterprise reporting software products, announces the latest product release of its flagship product, ReportServer. ReportServer 2.5.1 allows businesses the flexibility to host reports created using a variety of Microsoft.NET reporting packages for more robust reporting options.

This release focuses on further improving ReportServer's scheduling capabilities with the addition of supporting database-driven batch reports as well as custom e-mail templates for recipients receiving completed reports.

"Our ReportServer line is only product of its kind to offer compatibility with nearly any Microsoft.NET-based reporting product," said VersaReports President Andy Feibus. "With this release, we expanded our market-leading features by adding more ways for our customers to schedule reports in complex reporting environments. Our customers love ReportServer, because it is designed to meet the needs of any company, integrates easily into almost any existing infrastructure, and our customers benefit from significantly improved time and information management."

The VersaReports ReportServer 2.5.1 product line consists of six options— including four lower-cost editions developed to integrate seamlessly with a specific reporting program and two, all-in-one, universal editions designed for more demanding report server needs. The product line includes:

- ReportServer/CR – supports SAP Crystal Reports
- ReportServer/XR – supports DevExpress XtraReports
- ReportServer/AR – supports GrapeCity ActiveReports
- ReportServer/TR – supports Telerik Reporting
- ReportServer/Universal Standard Edition – supports all of the above report designers plus compatibility with other report designers outside of those VersaReports directly supports
- ReportServer/Universal Enterprise Edition – supports all that Universal Standard Edition has to offer but is targeted to companies with larger reporting service needs.

"We've designed our product line to maximize user-friendliness and flexibility," said Feibus. "ReportServer focuses on making it simple to schedule, produce, distribute and store reports, which ultimately improves efficiency and effectiveness for our customers."

VersaReports ReportServer 2.5.1 is competitively priced starting at $1,195. As part of the new release launch, all ReportServer editions will sell for $100 less than their respective list prices until June 30, 2016. For more information on VersaReports products, visit www.versareports.com.
